Ideation Phase
Brainstorm & Idea Prioritization Template

Date	28 September 2026
Team ID	SWTID-2026-2598
Project Name	AI BlogNest API
Maximum Marks	4 Marks

Step 1: Team Gathering, Collaboration and Problem Statement

Team Member: Depanjan Singh M, Harish R, Sachin M, Karan A,Murlidharan S

Problem Statement (How Might We): How might we help independent bloggers and small content teams write and publish high-quality blog posts faster, without spending excessive time on drafting and summarizing every article manually?

Step 2: Brainstorm, Idea Listing and Grouping

Content Creation

- AI-generated blog post drafts from just a topic
- AI-powered summarization of long blog content
- Automatic category tagging for generated posts

Content Discovery (Future Scope)

- Semantic search across blog posts
- Vector-based related-post recommendations

Security & Access

- JWT-based authentication for registered users
- Ownership-based authorization (only the author can edit/delete their post)
- Role-based access control – Admin/Editor roles (future scope)

Engagement (Future Scope)

- Comment system on blog posts
- AI-generated cover images for posts
- Multi-language translation of posts

Step 3: Idea Prioritization

Idea	Impact	Effort	Priority
JWT Authentication (Register/Login)	High	Low	1 – Must Have
Blog CRUD API	High	Medium	1 – Must Have
AI Blog Content Generation	High	Medium	1 – Must Have
AI Content Summarization	High	Low	2 – Must Have

Idea	Impact	Effort	Priority
Automatic Category Inference	Medium	Low	3 – Should Have
Semantic / Vector Search	Medium	High	4 – Could Have
Role-Based Access Control	Low	Medium	4 – Could Have
Comment System	Low	Medium	5 – Won't Have (this phase)

The prioritization above follows the MoSCoW method (Must / Should / Could / Won't Have) and directly shaped the functional requirements and sprint plan for AI BlogNest API.
